

## **Brussels-Union-Gardner, WI ~ Equipment Van**

This custom made Equipment Van/Rescue vehicle was built using a utili-master van body. Exterior compartments were cut-in the outside of the vehicle wherever possible and as large as possible to utilize as much of the available space as practical. The exterior compartments are equipped w/Gortite aluminum roll-up doors and the interior sprayed w/gray spatter paint. Each compartment is supplied w/1 adjustable shelf and the 2 front compartments have roll-out trays at the bottom. The compartments over the rear wheels have spare air bottle storage at the bottom which is open to the inside under the bench seating. The left rear compartment houses the on board Honda EM5000SXX1A gas generator on a slide out tray. The generator provides electricity to all specified outlets at the interior & exterior of the body. The 500 watt Extenda-Pods at the rear, and the combination heater/AC unit mounted on the roof of the vehicle. In the right rear compartment there is an on board cascade system and frag tank. The frag tank is only accessible from the inside of the vehicle so all bottle filling is done inside the apparatus. The interior of the apparatus is lined w/white Kemply and aluminum diamond plate including the floor. At the left front of the body there is a stainless steel command desk installed w/electrical outlets and an observation window. Over the rear wheels there is seating for 6 people, 3 each side, w/SCBA provisions built into the seats. The top of the exterior compartment provisions is lined w/Turtle Tile compartment matting and is set up for storage of equipment. There are 4 cabinets w/sliding plexi-glass doors installed 2 each side, 1 front and 1 back. In between the cabinets there is adjustable tracking w/one shelf at each location for additional equipment storage at the interior. The interior lighting consists of 7, 12-volt dome lights which are clear and 2 red dome lights over the seating areas for lighting while the vehicle is moving. There are 6 exterior Weldon scene lights installed around the perimeter for scene lighting. The warning lights and siren is all Federal Signal halogen lights. At the rear of the apparatus there is a trailer hitch installed and a pull out step installed under the rear step to assist in entering this custom built equipment van/rescue truck.
