

Edgar, WI Brush Unit

This brush unit is built on a customer supplied Ford F-350 chassis powered by a Ford Triton V-8 engine and automatic transmission. The body is an all aluminum diamond plate flat rack style body equipped with a transverse compartment across the front of the body with a headache rack above. The side compartments are also constructed from aluminum diamond plate full length of the body with doors at each side and at the rear of the unit. Under the flat rack ahead of the rear wheels is another aluminum diamond plate compartment with drop down door. At the center of the body is the department supplied skid unit consisting of a Defender tank, pump and hose reel. The warning light package is all Code 3 LED. Stainless steel step tubes, wheel simulators and brush guard finish off this brush unit for the Edgar, WI Fire Department.
