

Elba Township Fire Department ~ Lapeer, MI

These tankers for Elba Township Fire Department are built on Freightliner M2-106 chassis with 330HP Cummins diesel engines. There is an SCBA seat installed at the passenger side of each cab in place of the standard bucket seat. The apparatus is equipped with a Hale MBP 1000GPM PTO pump with pump control panel located in the left side compartment. The crosslays are supplied at the front on the body with removable trays that are only open to the driver side of the body. The water tank is a 2100-gallon poly wet-side tank equipped with three (3) Newton dump valves at the rear. The rear center valve is manually controlled and the side dumps are electrically actuated with controls in the cab and at the rear. Stainless steel spring-loaded doors cover the side dumps when not in use. The body is an aluminum body equipped with Amdor roll up doors at each side. The compartments are divided into two (2) sections with an adjustable shelf in each except for the pump panel section. At the right side of the body there is a folding tank storage bin with Ziamatic Quic Lift Portable Tank System brackets. At the left side of the water tank there is supplied a slide in ladder storage bin with a rear door. Hard suction hose storage is at the left side of the apparatus. The apparatus is equipped with Whelen Super LED warning lighting and a Code 3 Arrowstick at the upper rear.
