

Laona Fire Dept, Laona WI ~ Mini Rescue Pumper

This Mini Rescue/Pumper was built on a Ford F550 Super Duty Crew cab chassis with a diesel engine and automatic transmission. The body is an all aluminum structure equipped with standard flush mount swing doors. The compartments are equipped with adjustable shelving and slide out trays for equipment storage. The unit is equipped with an XRT Power Systems PTO operated hydraulic rescue tool power unit. The XRT System is plumbed to two (2) ports on the apparatus with shutoff valves, one (1) at the front bumper and one (1) at the rear body opening near the pump panel. The unit is also equipped with a 300 gallon water tank and a CET 18hp gasoline powered pump with booster reel and discharges for fire suppression/protection as needed. The apparatus is equipped with an all Whelen Super LED warning light package with halogen 12-volt scene lighting. Stainless steel brush guard, step tubes and wheel simulators finish off this multi-functional apparatus for the Laona, WI Fire Department.
