

Long Lake, WI ~ Pumper Refurb

This used Pierce pumper was completely stripped of aluminum diamond plate and trim. The apparatus body was then repainted to match the customer's specifications. The body was completely trimmed with new aluminum diamond plate and stainless steel wheel covers for a bright new look. The apparatus fire pump was checked over and tested along with rebuilding all the Akron discharge valves. A customer supplied generator was mounted on the apparatus on a rollout tray. Additional low level warning lights were added to meet NFPA standards. A shoreline auto eject, air eject and battery conditioner was also installed on the apparatus. The apparatus was then lettered and striped per customer specifications to finish off the refurbishment of this pumper.
