

Navarino-Lessor Fire Department, Bonduel, WI ~ Tanker

This tanker is built on a Freightliner M2-106 cab and chassis with a Cummins diesel engine. The body is an all aluminum structure custom built to the department specifications with large storage compartments equipped with Gortite aluminum roll up doors. The front full height compartments are full depth full height plus transverse at the forward 32" for their equipment storage requirements. Additionally the folding tank is stored in a rear slide in compartment with rear door. The water tank is a UPF 3000 gallon capacity tank with a single Newton dump valve and telescoping chute at the rear with two (2) 4" Firemen's Friend stainless steel check valve fills. The customer supplied portable pump is installed and plumbed to the tank at the right side compartment supplying water to a booster reel discharge at the right side compartment and three (3) 2 1/2" discharges, one (1) under the front bumper, one (1) at the rear panel and one (1) directly off of the pump. The warning light package is an all Whelen Super LED package.
