

Nichols Rural Fire Department, Nichols, WI ~ Pumper

This pumper for Nichols, WI is built on a Freightliner M2-106 4-door cab and chassis with a Cummins diesel engine. The pump is a Waterous CS 1250GPM pump equipped with the Waterous/Pneumax 140-SP PTO CAFSystem with a Waterous Advantus 6 foam injection system. A FoamPro powerfill is also installed on the apparatus for filling the foam tank from the ground. The pump module is a top mount module with the speedlays located under the transverse walkway. The body is an all aluminum structure with flush mount swing box pan doors. The water tank is a UPF 1000 gallon water tank with a 25 gallon foam cell. The ladders are stored in a slide in compartment at the right rear with door enclosing the ladders inside the body. Mounted in the rear step compartment there is one (1) Hannay electric cable reel and one (1) Hannay utility air hose reel. The warning light package is an all Whelen Super LED package. The apparatus is also equipped with a Harrison MCR Stealth 10kw hydraulic generator and two (2) FRC Focus 1500-watt/240-volt telescoping scene lights.
