

Saxeville, WI Tanker

This tanker is built on a Kenworth T-300 cab and chassis with a 360hp diesel engine. The truck is equipped with a Darley HM-500 PTO pump with pump control panel in the left side front compartment. The pump is plumbed with two (2) 2 ½" discharges. The water tank is a Pro Poly 3000 gallon tank equipped with three (3) Newton Kwik-Dump manual dump valves and telescoping chutes. The body is an all aluminum structure with Gortite aluminum roll up doors with a custom notch at the rear of the body to allow the apparatus to fit in the fire department stall. The folding tank is stored in a Ziamatic electrically powered rack at the right side, recessed into the right side of the body with a painted outer panel. The warning light package is an all Whelen Super LED package.
